

# Notes:

- I am 6'0", 160 lbs and this armor fits me "perfectly." Adjust it as needed to fit you.
- The templates are hand drawn so the quality is not professional, but they should be good enough. Feel free to modify them yourself.
- I used 6mm thick foam for most of the armor. I recommend buying a large roll of it to avoid ugly seam lines where there shouldn't be any. I used 2mm thick foam for the detailed pieces.
- The Helmet is unfortunately not foam. I used a Pepakura model that was hardened with Smooth Cast 65D resin. I then covered the helmet with spackling putty and sanded it into shape. The visor was a cheap motor cycle helmet visor that was already tinted.

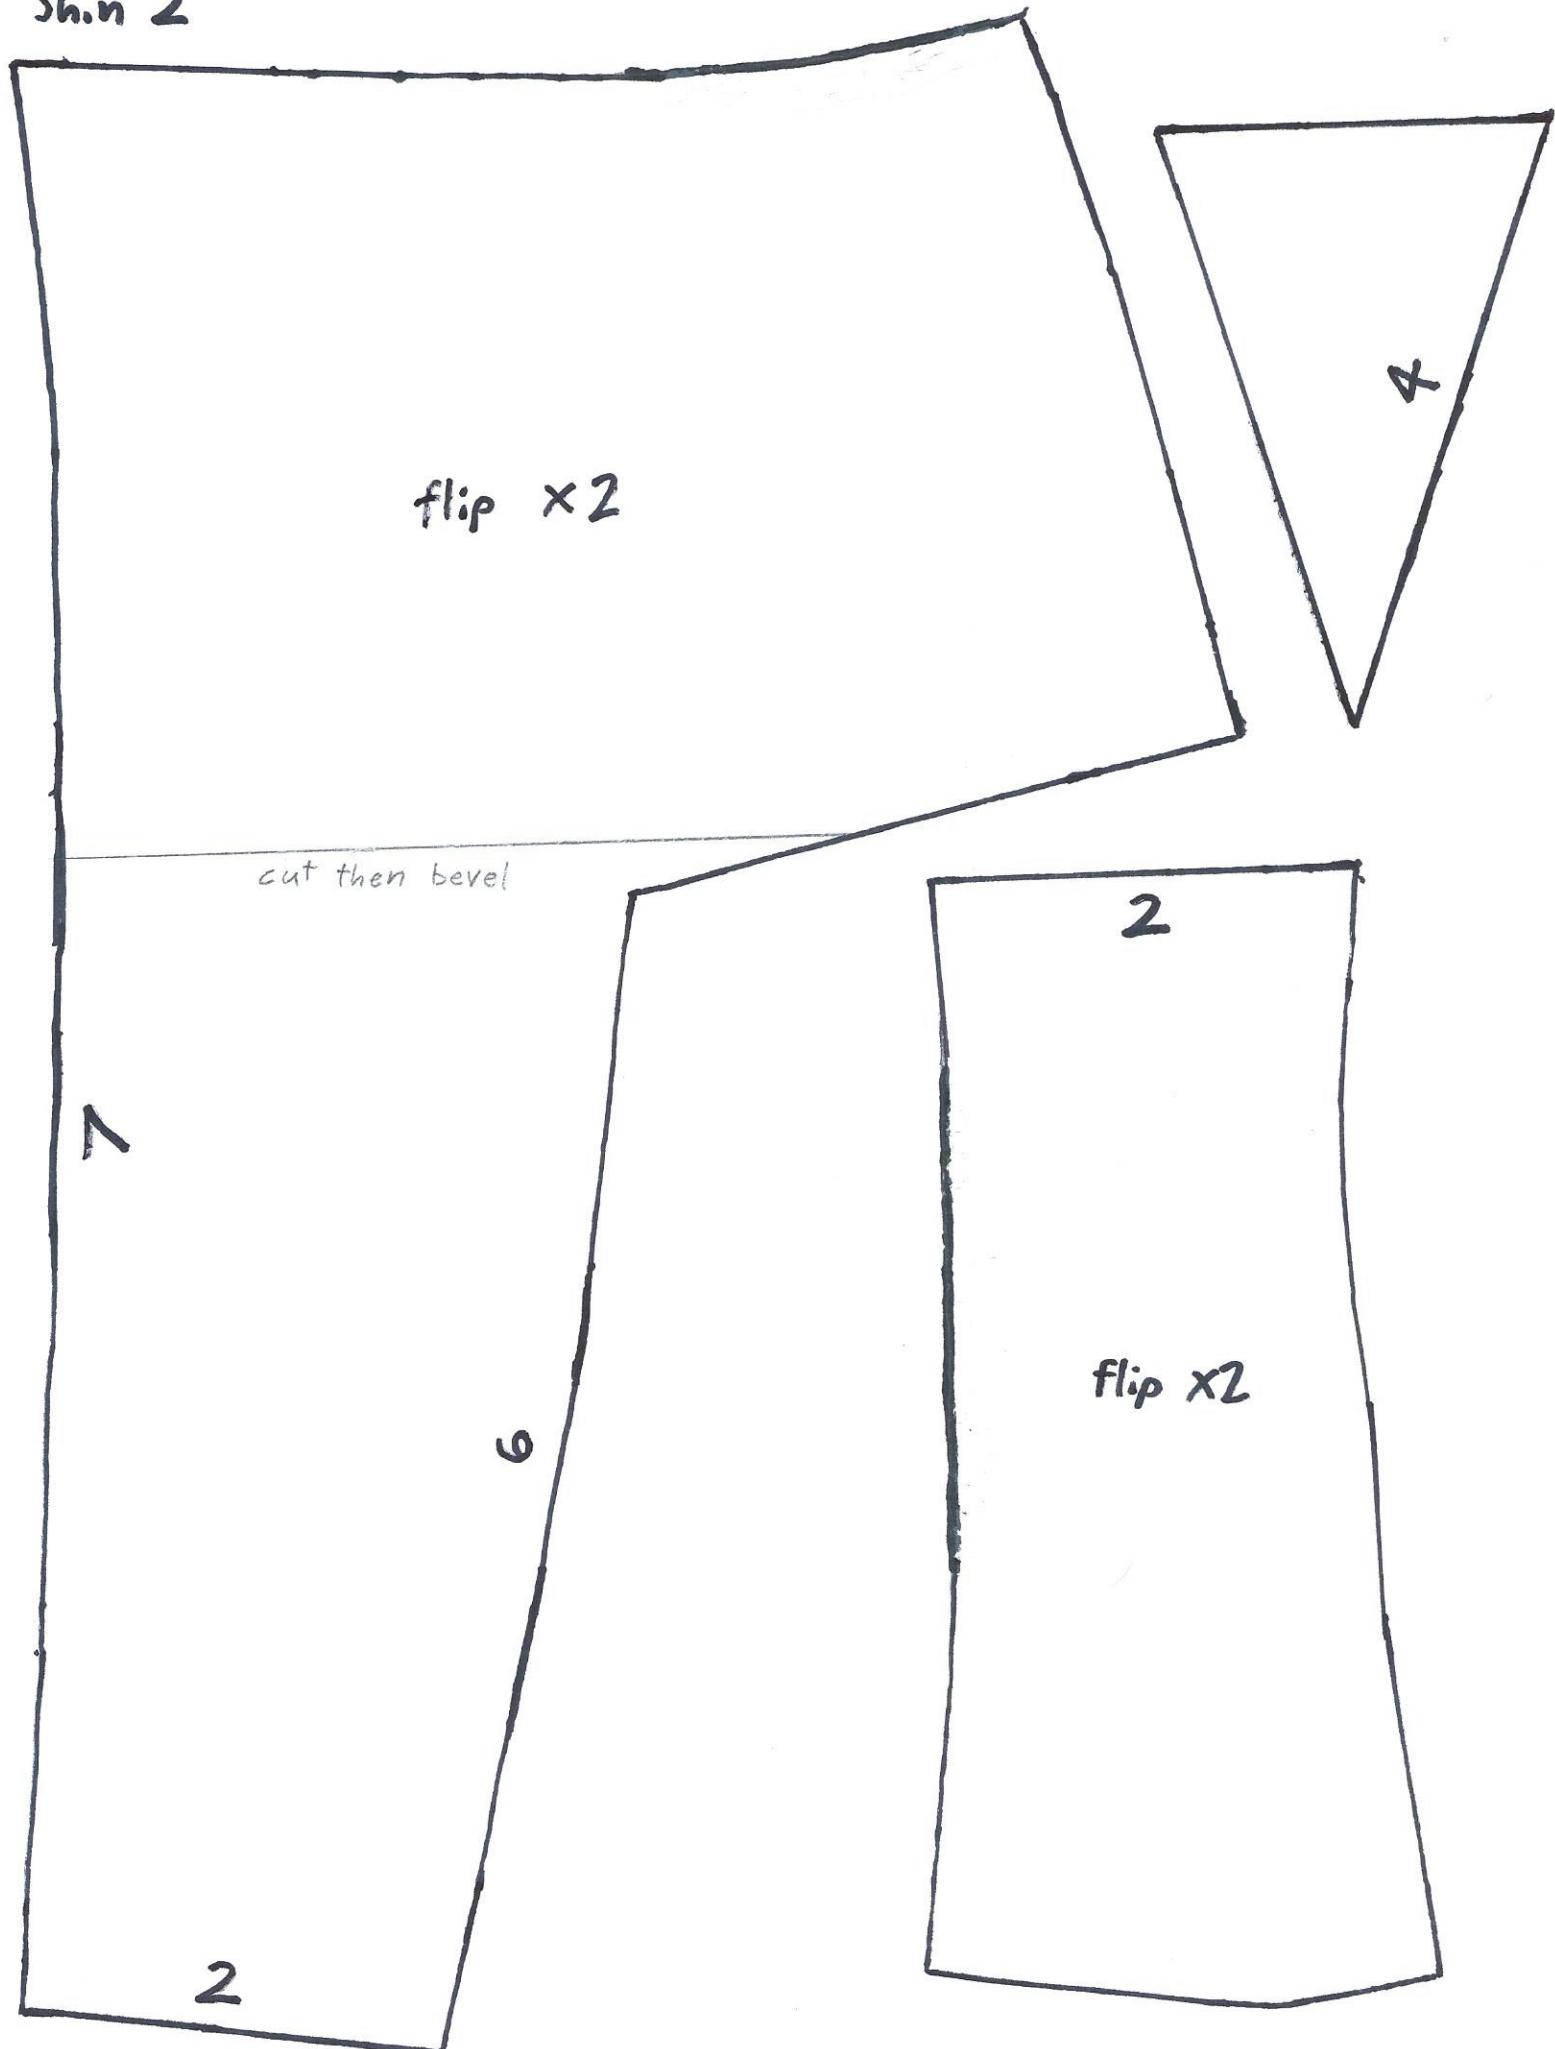

Enjoy

- Andrew Craig
